

Self-Referral to Physiotherapy

Physiotherapists have skill in the assessment and treatment of injuries and conditions that affect muscles, joints and soft tissues such as low back pain, shoulder pain, neck pain, recent injuries or joint and muscular pain.

If you are suffering with a similar condition, and would like to see a physiotherapist for an assessment please complete the attached referral form.

- You must be registered with **Quarterjack Surgery, Walford Mill, Old Dispensary**
- You must be 16 or over
- This service is NOT available for neurological, gynaecological or respiratory condition. Your GP or nurse practitioner will refer you with a letter in their usual way.
- Treatment after a recent operation: Please ask your consultant to refer to us which will include all required information

If you have any concerns you can always be referred to physiotherapy in the usual way with a letter from your GP, Consultant or Nurse.

Please send this self-referral form to:

Post: **Physiotherapy Department**
 Victoria Hospital
 Victoria Road
 Wimborne
 Dorset
 BH21 1ER

email: dhc.wimborne.physio@nhs.net

By hand: Outpatients reception
 Entrance 1

What will happen next?

A physiotherapist will look at your form to decide how soon we will need to see you. We have urgent, soon and routine appointments. Your appointment may be 30-45 mins, however you may be offered a shorter appointment in our 'Rapid Assessment Clinic' in order to commence your assessment and treatment plan as soon as possible.

We will contact you as soon as we can to arrange an appointment using the details you have provided on the form, so please ensure these are correct.

Please see over the page for advice on how to manage the problem in the meantime

What can I do to help myself in the meantime?

Research has shown that resting for more than a day or so does not help with problems such as back pain and may actually prolong pain and disability. You may need to modify your activities initially, but the sooner you get back to normal activity the sooner you will feel better.

Initially moving stiff joints and muscles can be painful, but this is a normal response and not a sign of damage. Feeling a bit sore initially is also normal and often a good sign that you are making progress. Gentle movements of the joints/muscles will help to prevent continued pain and stiffness.

Changing your position or activity frequently throughout the day will help to prevent and reduce stiffness. Try to build up your general activity gradually.

Hot or Cold?

If you have a recent injury (less than 72 hours) you may benefit from a pack of frozen peas or ice wrapped in a damp towel for 10 – 20 minutes. This may help to reduce any heat/swelling.

If you have an old injury or recurring problem you may find that holding a hot water bottle wrapped in a towel on the affected area for 10 – 20 minutes reduces pain. Movement of the affected area will aid in preventing stiffness and pain.

NB: Be aware that hot and cold can BURN and that you need to check (every 5 minutes) that your skin does not become very red or blotchy. If this happens **STOP** immediately.

Painkillers

'Over the counter' painkillers can be helpful. A pharmacist will be able to advise you on the appropriate tablets. If your symptoms worsen you may wish to see your GP.
